QA automation exercise

Home assignment · about 2 hours

Hi,

Please spend about 2 hours on this exercise. Use Playwright and TypeScript. You may use AI. If you do, say so in a short note with your answer.

The site is a public demo shop, Swag Labs:
https://www.saucedemo.com/

Log in with these values. The password is the same for both users.

- Working user: `standard_user`
- Blocked user: `locked_out_user`
- Password: `secret_sauce`

`standard_user` opens the products page. `locked_out_user` is rejected on purpose. Use the blocked user only in test 3.

Write three tests. Each test starts on the login page and can run on its own.

1. Sign in as `standard_user`. The products page opens, and Sauce Labs Backpack is visible.
2. Sign in as `standard_user`. Add Sauce Labs Backpack to the cart and open the cart. The cart contains that backpack.
3. Sign in as `locked_out_user`. The login page stays open and shows this error: Epic sadface: Sorry, this user has been locked out.

Send me the Playwright project, the command you ran, and whether the tests passed.

If the site does not open, send a screenshot of what you see.

Thank you.
